

# Tenant Settings

Tenant settings page is used to configure tenant based settings.

## General

The screenshot shows the 'Settings' page with the 'General' tab selected. The page title is 'Show and change application settings.' and there is a 'Save all' button. The 'General' tab is active, showing a 'Timezone' dropdown menu with 'Default [UTC]' selected. Other tabs visible are 'Appearance', 'User management', 'Security', and 'Invoice'. A 'Feedback' button is visible on the right side of the page.

Under the general tab, each tenant can configure default time zone setting for users of that tenant. Each user of the tenant can also change this setting for their own account.

If tenant doesn't make any change, time zone setting of host will be used.

## Appearance

The screenshot shows the 'Settings' page with the 'Appearance' tab selected. The page title is 'Show and change application settings.' and there is a 'Save all' button. The 'Appearance' tab is active, showing two sections: 'Application Logo' and 'Custom CSS'. Each section has a 'Choose File' button, a 'No file chosen' status, and a description of the file format and size limits. Below each section are 'Upload' and 'Clear' buttons. Other tabs visible are 'General', 'User management', 'Security', and 'Invoice'.

Under the appearance tab, each tenant can upload a logo file and upload a custom css file. In this way, each tenant can change the look of the application only for their account. Uploaded logo and css files can be easily removed by using the clear button.

### Form-Based Registration

☒ Allow users to register to the system.  
If you disable this, users will only be added by admin using user management page.

☐ New registered users are active by default.  
If you disable this, new users will not be active (and can not login) until admin manually activates the account.

☒ Use security image question (captcha) on registration.

☐ Use security image question (captcha) on login.

### Session Timeout Control

☒ Session Time Out Control Enabled

☒ Show Lock Screen When Timed Out

Timeout Second.

10

Countdown Modal Wait Time (Seconds)

10

### Other Settings

☐ Email confirmation required for login.

### Cookie consent

☐ Cookie consent enabled

### Profile

☐ Allow users to use Gravatar profile picture

Feedback

Under the user management tab, each tenant can configure some user management settings related to their account. Each tenant can enable/disable user registration for their account. Tenants can also make newly registered users for their account active or passive by default.

Each tenant can also enable/disable captcha on user registration and login page for their account.

Note: **Token Based Authentication** has `ReCaptchaIgnoreWhiteList` located in `WebConsts` . If you want a client app to be ignored for reCaptcha control during login, add a value to `ReCaptchaIgnoreWhiteList` and send the same value in the `User-Agent` request header for your login request from the client app. You can check the Xamarin mobile app in AspNet Zero to see how `ReCaptchaIgnoreWhitelist` works.

log out.

Also, each tenant can enable/disable cookie consent so ASP.NET Zero shows a cookie consent bar for the users of that tenant to accept cookie policy of the application.

Each tenant can force email confirmation for login.

Each tenant can allow tenant users to use Gravatar profile picture or not.

## Security

The screenshot displays the 'Settings' application interface. At the top, there's a header with 'Settings' and a subtitle 'Show and change application settings.' A 'Save all' button is in the top right. Below the header is a tabbed interface with five tabs: 'General', 'Appearance', 'User management', 'Security' (which is active), and 'Invoice'. The 'Security' tab contains two main sections. The first is 'Password complexity', which includes a checked checkbox for 'Use default settings' and four unchecked checkboxes for 'Require digit', 'Require lowercase', 'Require non-alphanumeric', and 'Require uppercase'. Below these is a 'Required length' input field with the value '3'. The second section is 'User Lock Out', which includes a checked checkbox for 'Enable user account locking on failed login attempts'. Below this is a label 'Maximum number of failed login attempt count before locking the account' followed by an input field with the value '5'. At the bottom is a label 'Account locking duration (as seconds)' followed by an input field with the value '300'. On the right side of the settings panel, there is a vertical 'Feedback' button with a speech bubble icon.

Security tab contains password complexity settings. Each tenant can define password complexity settings in this tab for their account. Each tenant can also configure user lock out settings.

## Invoice

# ASP.NET CORE ANGULAR

## DOCUMENTS

### Invoice Information

Legal Name

Address

Tax/VatNo

Under this tab, each tenant can configure their legal name, tax number and address which will be displayed on the generated invoices. Note that, tenants can only generate invoice if they made a payment for a subscription.

If we disable multi-tenancy, some host settings are also shown in this page (since there is no host setting page).
