

Login

Default route for AccountModule is the login/**login.component**:

The login form for ASP.NET ZERO. It features the ASP.NET ZERO logo at the top, followed by the text "Log in". Below this are two input fields: "User name or email *" and "Password *". There is a checkbox for "Remember me" and a link for "Forgot password?". A large blue "Log in" button is centered below the inputs. At the bottom, there is a link for "New tenant | Email activation" and a row of flags representing different countries.

The **tenant selection** section above login section is shown only in a **multi-tenant** application and if "tenancy name detection" is **not possible from url** (for example, if you use subdomain as tenancy names, no need to show a tenant selection). When we click Change link, tenant change dialog appears and we can change the tenant. There is a single tenant named **Default** in the initial database. Leave tenancy name input as blank to login as **host**.

We can use **admin** user name and **123qwe** password in first run the application.

Change password

Please enter your new password.

Password

Password (repeat)

Submit

After the login, we are redirected to the **application** (app.module).

Feedback

User Lockout

You can configure user lockout settings on Settings page. Users are locked out for specified duration if they enter wrong password for a specified amount of times.

Both values can be configured under the Security tab of Settings page in the application.
