

Edition Management

If you're not developing a multi-tenant application, you can skip this section.

Most **SaaS** (multi-tenant) applications have **editions** (packages) those have different **features**. Thus, they can provide different **price and feature options** to their tenants (customers). **Editions page** (available in host login) is used to manage application's editions:

Editions

Manage editions and features of the application

+ Create new edition

Actions	Edition name	Creation time
<div>⚙ Actions ▾</div>	Standard	11/21/2017
<div>⚙ Actions ▾</div>	Premium	11/22/2017

Showing 1 to 2 of 2 entries

Editions are used to group feature values and assign to tenants. We can create a new edition by clicking "**Create new edition**" button:

ASP.NET CORE ANGULAR

Feedback

An edition can be free or paid. If it's a paid edition then you should enter monthly and annual prices. You can allow tenants to use trial version of this edition for a specified days. Then you can determine an expire strategy: How many days to allow a tenant to use the application after subscription expires. And finally, you can deactivate tenant or assign to a free edition if they don't extend their subscription.

Features tab is used to determining features available for the edition:

ASP.NET CORE ANGULAR

DOCUMENTS

The screenshot shows a modal window with two tabs: "Edition properties" and "Features". The "Features" tab is selected. It displays a tree view of features with checkboxes and a text input for "Maximum user count".

- ☒ Chat
 - ☒ Chat with host
 - ☒ Chat with other tenants
- ☐ Maximum user count
- ☒ Test check feature
- ☒ Test check feature 2

At the bottom right, there are two buttons: "Cancel" and "Save".

After creating an edition, only name and features of the edition can be changed. If you have made a mistake while creating the edition or if you want users to stop subscribing this edition, just delete the edition and create another one. Since Edition is a [soft-delete](#) entity, it will not be deleted from database but will be marked as deleted.

In order to delete and edition, all tenants of that edition must be moved to another edition. You can easily do that in Editions page by clicking the "Actions" button for an Edition and then select "Move tenants to another edition" item. After that, you will see a modal page like below:

The screenshot shows a modal window titled "Move Tenants to Another Edition". It contains a message "42 tenants will be moved" and a dropdown menu for "Edition" with "Standard" selected. At the bottom right, there are two buttons: "Cancel" and "Save".

You can click the link on this page to see which tenants will be moved to the newly selected edition.
