

Language Management

Language management page is used to manage (add/edit/delete) **application languages** and change **localized texts**:

Languages

Manage user interface languages.

+ Create new language

Actions	Name	Code	Creation time	Is enabled
<div>⚙ Actions ▾</div>	Deutsch	de	11/21/2017	<div>Yes</div>
<div>⚙ Actions ▾</div>	English (Default)	en	11/21/2017	<div>Yes</div>
<div>⚙ Actions ▾</div>	Español (México)	es-MX	11/21/2017	<div>Yes</div>
<div>⚙ Actions ▾</div>	Español (Spanish)	es	11/21/2017	<div>Yes</div>

We can create new language, edit/delete an existing language and **set a language as default**. Note that; tenants can not create/edit/delete default languages, but host users can do.

When we click to **Change text** for any language, we are redirected to a new view to edit language texts:

We can select any language as a **base** (reference) and change **target** language's texts. Base language is just to help the translation progress. Since there may be different [localization sources](#), we select the source to translate. When we click the edit icon, we can see the edit modal for the selected text:

Edit text
